

Hyde Park West Telecommunications helping to unite Oil & Gas operators with digital transformation solutions at OGAT Week in Houston

Hyde Park West Telecommunications is proud to be partnering with Oil & Gas Automation and Technology Week on 14-15 February 2023 in Houston, TX.

The Oil & Gas, Chemical and Petrochemical sector is at a crucial point of change, driven by the opportunities presented by digital transformation. Against a backdrop of rising costs and talent shortages, many organizations are actively investing in digital tools to flourish growth, increase competitiveness, better safety and health, and dramatically increase profitability.

Despite these long-term visions, recent reports suggest that up to **70% of these digitalization projects have failed to move beyond the pilot phase.**

To help these operators overcome their rising digital transformation and connectivity challenges, Hyde Park West Telecommunications will be exhibiting their tailored or customized connectivity solutions to attendees and expert speakers from upstream, midstream and downstream organizations and aid them in creating a highly effective digital strategy for their operations. These solutions will be demonstrated at the Summit.

Hyde Park West Telecommunication's demonstration will provide a unique opportunity for attendees to see and evaluate how the organization's preconfigured HOO-nah devices or tailored solutions can solve their communication challenges.

Other speakers from leading operators sharing their insights include:

- **Biju Misra**, Director, Corporate Business Services/Automation CoE at **Enbridge**
- **Kat Duggan**, Manufacturing Digital Transformation Leader, **Dow**
- **Bryan Kaus**, Director of Commercial Business Improvement and Optimization at **Phillips 66**
- **Afshean Talasaz**, Director – Digital Innovation & Enterprise Architecture at **Magellan Midstream Partners**

Join Hyde Park West Telecommunications at Oil & Gas Automation and Technology Week to hear best practice strategies to optimize business performance, create new business capabilities, and strengthen your technology foundation.
